Hospitals : CHU Grenoble, Le Chesnay, Hospices de Lyon, ...

Park and ride: Gautrain, Dubaï, ...

PLATE READING OPTIONS

The plate reading software manages doubtful cases. In the issue of a mismatch between entry and exit of the park, the server displays the 2 pictures so that the agent can decide.

The system can be configured to open the barrier at the license plate recognition. The plate is used as an identifier and no ticket is required. For subscribers, the plate number can be added in the customer database. And for the other types of customers, the enter of the license plate number links the payment to the ID and the exit is triggered when reading the plate.

- A price fixing method inherited from tourist booking world
- In service in the car park of **Nîmes city**
 - Interactive payment device
 - Video displays at car park entries
 - Connected to Kowee® back office
 - Third party Kowee® fare engine
- Prices can change up to **once per hour**
- The system supports up to **400** price combinations
